100% detected as AI

The percentage indicates the combined amount of likely AI-generated text as well as likely AI-generated text that was also likely AI-paraphrased.

Caution: Review required.

It is essential to understand the limitations of AI detection before making decisions about a student's work. We encourage you to learn more about Turnitin's AI detection capabilities before using the tool.

Detection Groups

1 AI-generated only 100%
Likely AI-generated text from a large-language model.

2 AI-generated text that was AI-paraphrased 0%
Likely AI-generated text that was likely revised using an AI-paraphrase tool or word spinner.

Disclaimer
Our AI writing assessment is designed to help educators identify text that might be prepared by a generative AI tool. Our AI writing assessment may not always be accurate (it may misidentify writing that is likely AI generated as AI generated and AI paraphrased or likely AI generated and AI paraphrased writing as only AI generated) so it should not be used as the sole basis for adverse actions against a student. It takes further scrutiny and human judgment in conjunction with an organization's application of its specific academic policies to determine whether any academic misconduct has occurred.

Frequently Asked Questions

How should I interpret Turnitin's AI writing percentage and false positives?
The percentage shown in the AI writing report is the amount of qualifying text within the submission that Turnitin's AI writing detection model determines was either likely AI-generated text from a large-language model or likely AI-generated text that was likely revised using an AI-paraphrase tool or word spinner.

False positives (incorrectly flagging human-written text as AI-generated) are a possibility in AI models.

AI detection scores under 20%, which we do not surface in new reports, have a higher likelihood of false positives. To reduce the likelihood of misinterpretation, no score or highlights are attributed and are indicated with an asterisk in the report (*%).

The AI writing percentage should not be the sole basis to determine whether misconduct has occurred. The reviewer/instructor should use the percentage as a means to start a formative conversation with their student and/or use it to examine the submitted assignment in accordance with their school's policies.

What does 'qualifying text' mean?
Our model only processes qualifying text in the form of long-form writing. Long-form writing means individual sentences contained in paragraphs that make up a longer piece of written work, such as an essay, a dissertation, or an article, etc. Qualifying text that has been determined to be likely AI-generated will be highlighted in cyan in the submission, and likely AI-generated and then likely AI-paraphrased will be highlighted purple.

Non-qualifying text, such as bullet points, annotated bibliographies, etc., will not be processed and can create disparity between the submission highlights and the percentage shown.

Section 1:

Personal trainers who want to start their career need to follow specific steps to demonstrate competence and safety when helping clients achieve fitness objectives. The path to becoming a personal trainer begins with three essential requirements which include reaching age 18 and obtaining a high school diploma or equivalent and CPR/AED certification. The fundamental requirements guarantee that trainees start with adequate knowledge and emergency preparedness. The next step for candidates involves selecting a legitimate certification program. The fitness training industry recognizes NASM and ACSM and NSCA and ACE as its most popular certification programs which present different training methods. The NASM certification program focuses on corrective exercise techniques while ACSM provides scientific training that applies directly to practice.

The next step for candidates involves thorough preparation to succeed in their certification exam after choosing their program. The study curriculum includes subjects about anatomy, physiology, client assessment and exercise programming. Passing the certification exam leads to essential practical experience for trainers. New trainers who want to build their hands-on skills choose to work at fitness facilities or complete internships. Trainers who want to stay competitive in their field should develop expertise in corrective exercise as well as sports performance and nutrition coaching. The requirement for continuous education serves two purposes: it helps trainers keep their certification active and it ensures they stay current with industry developments.

Certified trainers who want to advance their careers can choose from different options including gym work and private training or establishing their own online coaching practice. Personal training as a career path becomes both lucrative and meaningful when trainers dedicate themselves to achieving successful client results.

Section 2:

ACSM Educational Opportunities: The Key to Personal Trainer Success

The ACSM Educational Opportunities Meetings and Providers journal provides essential information for Personal Trainers who want to establish a successful career. It breaks down the process step by step, leaving no room for guesswork. The first milestone? Meeting the prerequisites. Personal trainers must meet three essential requirements to begin their training: they must be at least 18 years old and have a high school diploma (or equivalent) along with valid CPR/AED certification. The basic requirements provide trainers with essential knowledge about safety protocols and emergency response before starting their gym work.

The selection of certification stands as the most crucial decision. The ACSM-CPT (Certified Personal Trainer) certification represents the highest standard for trainers who work with healthy clients to design safe workout plans. The ACSM-EP (Exercise Physiologist) certification leads to advanced knowledge for trainers who want to explore specialized fields or work with unique populations.

The certification process requires continuous effort. Personal trainers need to earn continuing education units (CEUs) for certification renewal which occurs every three years. The certification process keeps trainers active and informed about new research while maintaining their methods in sync with current scientific knowledge. Specialized training in corrective exercise and strength and conditioning enables trainers to differentiate themselves from competitors in a crowded market. Specialized training abilities help personal trainers gain more clients while providing access to lucrative income streams.

Professional networking proves to be the key factor that drives career advancement in personal training. Trainers who attend ACSM conferences and workshops gain access to industry leaders while expanding their knowledge base and building important professional connections. A network provides more than access to opportunities because it keeps your career ahead of industry developments.

The ACSM certification process serves more than certification purposes. The path leads to continuous growth and maintains industry relevance because knowledge serves as the primary power source. The journal presents a lasting roadmap for personal trainers who want to achieve excellence in their field.
